

# NEW HAMPSHIRE CITIZENS *for* RESPONSIBLE LIGHTING

## Mission

We will work to reduce light pollution and light trespass; to educate the public about effective, glare free lighting, and efficient security lighting; and to preserve the beauty of the night skies of the state of New Hampshire.

## Method

NHCRL works with local citizens, businesses, towns and cities to promote responsible outdoor lighting. We want safe, cost effective lighting at night. We want to insure it is installed correctly to prevent unsafe conditions like glare into roadways and onto sidewalks, and to prevent light from intruding into areas where it is not wanted, such as private residences. In many cases, all that is needed is to point existing lights correctly, install a simple shield, or use a less intense light source.

## What can you do?

Join us. We have no meetings or fees and do not require you to be active. We simply need you to agree that you want your town or city to insure safe lighting as described above. Do this by sending us your name, address, and city; optionally your telephone number, small address, and indicate if you would like to be active. We will post our progress by E-mail.

## What we will do

We will inform the business, town or city we are working with how many local citizens we represent. Of course, the greater number of local people we represent the better our chance to have a positive effect on lighting issues. Please join us now, to help reduce light pollution in the cities of New Hampshire, and prevent it from advancing in our towns and rural areas. We all like the state for what it is, not what it is becoming. Help save the night sky before it turns orange.
